1. Purpose and Scope

The purpose of this Code Subsidiary Document is to define the recipients, timetable, content and specification of standing reports and data extracts provided by the CMA on a systematic basis. The specifications will enable recipients to design tools and procedures to use the information provided.

2. Market Dataset

2.1 Introduction

The CMA shall provide the Market Dataset (MDS) to Trading Parties to provide detailed information about Supply Points and associated data. Each release of the MDS comprises five sets of data:

- Water SPIDs;
- Sewer SPIDs;
- Meters;
- DPIDs; and
- Meter Readings.

2.2 Timetable and Distribution

The CMA shall use reasonable endeavours to extract the MDS from the Supply Point Register between the end of the last Business Day of a Month and the start of the first Business Day of the next Month. In any event, the CMA shall extract the MDS from the Supply Point Register as soon as is reasonably practical after the end of the Month.

Distribution:

- Within ten Business Days of the end of the Month the CMA shall place the MDS for the Month on a secure data storage area. Trading Parties may collect the MDS anytime up to one year from the end of the Invoice Period;
- The distribution method may be redefined by the CMA from time to time. The CMA shall use reasonable endeavours to advise Trading Parties one month in advance of any change.

2.3 Extraction Rules

The extraction rules are:

- **SPIDs:** For both Water and Sewerage SPIDs all SPIDs that:
 - Held “Tradable” status in the Central System at any time before the Go Live Date or have been connected on or after the Go Live Date and
 - the SPID data is “complete & consistent” in accordance with CSD0101 (Registration: New Connections and New supply Points);

- **Meters:** The meters associated with the above SPIDs that are currently operational. This excludes meters associated with the above SPIDs which have been removed or swapped out in accordance with CSD0104 (Maintain SPID Data)¹;
- **Meter Readings:** All meter readings for the above meters. For the avoidance of doubt this includes interpolated meter rollover readings inserted by the CMA; and
- **DPIDs:** All DPIDs that have been created and not discontinued.

2.4 File Structure

The MDS contains five files with the structured filenames in the format X3nxxxx_YYYYMMDD where YYYYMMDD is the date the file was created and the X3nxxxx defines the file type as listed below:

- X31WSPID: Water SPIDS;
- X32SSPID: Sewer SPIDS;
- X33Meter: Meters;
- X34DPID: DPIDs; and
- X35READS: Meter Readings.

The field separator is the pipe character "|". Fields are not separated by quotation marks; though quotation marks may occasionally be found in data fields. The first line of each file contains the field names.

The file structures are set out below. The X31, X32, X33 and X34 files all have the same address block which is detailed once at the end of this section.

¹ There are recognised issues that not all meters are extracted; this includes the known faults that (i) meters that have a null YVe are not reported and (ii) some (but not all) meters which are part of a meter network are not reported. Once these faults are remedied this footnote will no longer apply

Explanation of notation:

Type	<p>Nvarchar(X) is a field containing character data possibly numerics with maximum length X.</p> <p>Decimal(x,y) is a numeric field with a maximum of x digits with a maximum of y digits after the decimal place. Hence maximum space is number of digits plus decimal place and possible leading minus sign.</p>
Opt	<p>M is Mandatory</p> <p>O is Optional</p>

3. New and Partial SPIDs Report

3.1 Introduction

The CMA shall provide the Trading Parties (TP) with the New and Partial SPIDs report (NAPS) which contains comprehensive information about the respective Supply Point Core. Each TP shall receive an individual report which accommodates for the TP's relevant data.

3.2 Timetable and Distribution

The CMA shall use reasonable endeavours to extract the NAPS within the first 10 Business Days of the month. The distribution of NAPS will strictly follow the same method as the distribution for the Market Dataset (see [2.2](#)).

3.3 Extraction rules

Each SPID core is associated with either

- a water SPID;
- a sewerage SPID; or
- a related water and sewerage SPID pair.

Information is extracted in respect of each SPID associated to a SPID core where any SPID associated with that SPID core is either 'new' or 'partial'.

Information	SWW report	LP report
SPID core	Yes	Yes
Water and / or sewerage service	Yes	Yes
Water SPID	Yes	Yes
Water SPID status	Yes	Yes
Water SPID connection date	Yes	Yes
Water SPID disconnection date	Yes	Yes
Water SPID earliest metering programme date	Yes	Yes
Water SPID earliest positive rateable value date	Yes	Yes
Water SPID earliest rateable value based service element date	Yes	Yes
Water SPID earliest none rateable value based service element date	Yes	Yes
Sewerage SPID	Yes	Yes
Sewerage SPID status	Yes	Yes
Sewerage SPID connection date	Yes	Yes
Sewerage SPID disconnection date	Yes	Yes

Sewerage SPID earliest metering programme date	Yes	Yes
Sewerage SPID earliest positive rateable value date	Yes	Yes
Sewerage SPID earliest rateable value based service element date	Yes	Yes
Sewerage SPID earliest none rateable value based service element date	Yes	Yes
Customer ID	Yes	Yes
Water SPID licensed provider	No	Only for respective LP
Sewerage SPID licensed provider	No	Only for respective LP

3.4 File Structure

Each NAPS report has the following filename: <TP>-naps-<yyyy>-<mm>.csv. The data set is comma separated. The first line is the header line; subsequent lines contain the detailed information.

3.5 Detailed Record Content

Field name	Explanation	Type	Notes
Spid_core	SPID core	Int	
Water_or_sewerage_service	Denotes what kind of supply point: water only, sewerage only or both water and sewerage	Text	Values are: 'water', 'sewerage', 'water and sewerage'
W_spid	Water SPID	Nvarchar(12)	'n/a' if there is none
W_spid_status	Status of water SPID	Text	Values are: 'new', 'partial', 'tradable', 'disconnected', 'rejected', 'temp disconnection', 'deregistered', 'n/a'
W_connection_date	Date of water SPID connection	Date	yyyy-mm-dd; or 'n/a'
W_disconnection_date	Date of water SPID disconnection	Date	yyyy-mm-dd; or 'n/a'
W_earliest_ti_flag_date	Date of the earliest metering programme on	Date	yyyy-mm-dd; or 'n/a'

	a water SPID		
W_earliest_pos_rv_date	Date of the earliest positive rateable value on a water SPID	Date	yyyy-mm-dd; or 'n/a'
W_earliest_rv_based_se_date	Date of the earliest rateable value based service element on a water SPID	Date	yyyy-mm-dd; or 'n/a'
W_earliest_non_rv_based_se_date	Date of the earliest non rateable value based service element on a water SPID	Date	yyyy-mm-dd; or 'n/a'
S_spid	Sewerage SPID	Nvarchar(12)	'n/a' if there is none
S_spid_status	Status of sewerage SPID	Text	Values are: 'new', 'partial', 'tradable', 'disconnected', 'rejected', 'temp disconnection', <u>'deregistered'</u> , 'n/a'
S_connection_date	Sewerage SPID connection date	Date	yyyy-mm-dd; or 'n/a'
S_disconnection_date	Sewerage SPID disconnection date	Date	yyyy-mm-dd; or 'n/a'
S_earliest_ti_flag_date	Date of the earliest metering programme on a sewerage SPID	Date	yyyy-mm-dd; or 'n/a'
S_earliest_pos_rv_date	Date of the earliest positive rateable value on a sewerage SPID	Date	yyyy-mm-dd; or 'n/a'

S_earliest_rv_based_se_date	Date of the earliest rateable value based service element on a sewerage SPID	Date	yyyy-mm-dd; or 'n/a'
S_earliest_non_rv_based_se_date	Date of the earliest non rateable value based service element on a sewerage SPID	Date	yyyy-mm-dd; or 'n/a'
Customer_name	Whether SPID core has a customer name	Text	Values are: 'present', 'none'
W_lp	LP of water SPID	Text	Same as the D1005_SenderOrgId used when sending messages to CMA; 'n/a' if no water SPID; 'xxxx' if SPID belongs to different LP
S_lp	LP of sewerage SPID	Text	Same as the D1005_SenderOrgId used when sending messages to CMA; 'n/a' if no sewerage LP; 'xxxx' if SPID belongs to different LP
